Meet Damilola

"My time at TUS was a rollercoaster of experiences. I went from having my head stuck in my books to running a social and cultural society of over 200 people. I've met various people from all over the world, some I keep in touch with, and some became close friends even after I finished my course.

My academic life was also one I will always look back on fondly because of my supportive lecturers, friendly course mates and dedicated supervisor. Because of them (and a lot of effort on my part) I was able to finish my degree with a first-class honour. Now I work as a graduate facilities engineer at Intel and am very happy with my choices in life so far.

I hope any incoming students and current students will be able to fully utilise TUS for all it's worth and have fun doing it."

Oluwadamilola Akinsola – Bachelor of Engineering (Hons) in Mechanical Engineering (Facilities).
Currently employed as Facilities Engineer at Intel.
